SAST Security Scan Report

Static Application Security Testing Analysis

Generated on December 23, 2025 at 12:16 PM

Executive Summary

Metric	Value
Total Findings	1
Unique Files with Issues	1
Files Scanned	36
Files Skipped	3
Scan Engine	OSS
Semgrep Version	1.136.0

Findings by Severity

Severity	Count
ERROR	1

Finding #1: Path Traversal with FastAPI

Property	Value
Check ID	python.fastapi.file.tainted-path-traversal-stdlib-fastapi.tainted-path-traversal-stdlib-fastapi
Severity	ERROR
File	repo_l5daylbi\backend\api_routes\routing_normal_sys.py
Location	Line 79, Column 23
Likelihood	MEDIUM
Impact	HIGH
Confidence	HIGH
CWE	CWE-22: Improper Limitation of a Pathname to a Restricted Directory ('Path Traversal')
OWASP	A01:2021 - Broken Access Control, A05:2017 - Broken Access Control

Description

The application builds a file path from potentially untrusted data, which can lead to a path traversal vulnerability. An attacker can manipulate the path which the application uses to access files. If the application does not validate user input and sanitize file paths, sensitive files such as configuration or user data can be accessed, potentially creating or overwriting files. In FastAPI apps, consider using the Starlette `:path` annotation in the route declaration to automatically sanitize paths and filenames.

Code Snippet

```
79|             with open(path,"wb") as file:
```
